

Akshit Negi

Ghaziabad, UP | akshitnegi501@gmail.com | +91 9625194401 | linkedin.com/in/akshit-negi-9533582b0 | github.com/Akshit501

TECHNICAL SKILLS

AI & Automation

Gemini, Claude, Antigravity, GitHub Copilot, Cursor, OpenAI Codex, AI Agents, Prompt Engineering, Process Automation

Backend & APIs

Node.js, Express.js, RESTful APIs, Socket.IO, WebRTC, Cron Jobs, JWT

Databases & Data

MongoDB (Aggregation, Schema Design), MySQL, Firebase (Real-time DB, Auth)

Frontend & UX

React.js, JavaScript, HTML5, CSS3, Wireframing, Human-Centered Design

Platforms & Tools

Git, MongoDB Atlas, Render, Vercel, Postman, VS Code

EDUCATION

BTech in IT

Noida Inst. of Engineering & Tech.
2022 – 2026

Class XII (CBSE)

NVM, Delhi
2021 – 2022

CERTIFICATIONS

Human-Centered Design – Acumen Academy

Introduction to AI – LinkedIn

Java Programming – Coursera

OOP in Java – Coursera

PERSONAL DOSSIER

Languages: English (Fluent), Hindi (Native)

Soft Skills: User Empathy, Strategic Thinking, Problem Solving, Adaptive Leadership, Technical Translation

PROFESSIONAL SUMMARY

Aspiring Technical Product Manager (TPM) and results-driven **Backend Developer Intern** with a strong software engineering foundation and expertise in building scalable, real-time communication and data platforms. Hands-on expert in leveraging cutting-edge generative AI technologies—including Large Language Models (Claude, Gemini, Codex), AI code assistants (Cursor, GitHub Copilot, Antigravity), and AI agents—to automate workflows, accelerate product prototyping, and optimize delivery lifecycles. Proven ability to translate complex business needs into robust technical requirements, collaborate across cross-functional engineering teams, and utilize data-driven insights to build user-centric products.

CORE COMPETENCIES

- AI & Automation Product Scoping:** Designing LLM integrations, prompt engineering, task-automation engines, and agentic workflows.
- Technical PM Scoping:** System architecture, API (RESTful) designs, database optimization, and real-time protocol management (WebRTC, WebSockets).
- Product Strategy & Agile:** Roadmap planning, competitor analysis, user research, feature prioritization (RICE, MoSCoW), and Agile sprints.
- Data-Driven Decisions:** Metrics analysis, strong algorithmic logic, database schema optimization, and performance optimization.

PROFESSIONAL EXPERIENCE

Backend Developer Intern | TECHUGO

March 2026 – Present

- Product Scoping & Specifications:** Collaborated with stakeholders (UX, QA, Dev) to translate requirements into technical specs, architectures, and sprint backlogs.
- AI-Enhanced Velocity:** Built custom automation scripts and utilized AI tools (Cursor, Copilot, Claude, Gemini) to automate boilerplate, unit testing, and workflows, reducing prototyping time.
- Database Scale & Latency:** Spearheaded database performance tuning and MongoDB aggregation pipeline optimization, improving platform efficiency and query speed.
- Real-time Scoping:** Led the integration of WebRTC and Socket.IO for peer-to-peer real-time communication features, enhancing active user interaction.
- Growth Loops & Automation:** Designed automated growth messaging engines (Nodemailer, Cron Jobs) to trigger contextual transactions, improving user retention and communication flow.

KEY PROJECTS

PayPulse (Subscription Payment Tracker) | Product Owner & Lead

2025-26

- What it does:** A web app that helps people track their subscriptions and stop paying for services they forgot about.
- Built with AI help:** Used AI tools (Gemini, Claude, Codex, Cursor) to write tests, set up the database, and document the API faster.
- Keeping users engaged:** Added automatic reminders before renewal dates, which increased user retention by 40%.
- Keeping data safe:** Set up secure login (JWT) and safe storage so users' payment and account details stay private.

PDF Converter (PdfDrip) | Founder & Developer

2025-26

- What it does:** Built PdfDrip, a browser tool with 10 features for working with PDFs — merge, split, compress, convert, and more — all in one place.
- Keeping data safe:** Made every file operation run directly in the browser instead of on a server, so users' files stay private and are never uploaded anywhere.
- Built with AI help:** Used AI coding tools (Claude, Cursor) to build and improve the app faster, shipping new features in less time.
- Simple, clean design:** Designed a clean, easy-to-use interface with light and dark mode that works smoothly on both phone and desktop.

INTERESTS

Emerging AI agent frameworks, prompt engineering, building developer automation systems, human-centered product design, and tracking tech market innovations.
